

INTRODUCTION TO ASCOT

24th January 2018

Ann-Marie Towers

Adult Social Care Outcomes Toolkit

- A collection of tools for measuring the outcomes for service users and family (unpaid) carers across social care services and interventions.
- Social Care Related Quality of Life (SCRQoL)
 - Domains reasonably affected by social care
 - Broad enough to apply to everyone
 - Enable comparison with general population
- www.pssru.ac.uk/ascot

Domains for service users

- Personal cleanliness and comfort
- Food and drink
- Safety
- Clean and comfortable accommodation
- Social participation and involvement
- Control over daily living
- Occupation
- Dignity

4 outcome states per domain

Ideal state:

individual's needs and preferences are met.

No needs:

needs are met but not to desired level

Some needs:

 sufficiently important or frequent to affect quality of life (but no health implications)

High level needs:

 mental or physical health implications if they are not met over a period of time. This may be because of severity or number.

Derived scores

Current SCRQoL:

measures situation now, often with services already in place.

Expected SCRQoL:

- Estimates what SCRQoL would be in absence of services (assuming nobody else stepped in)
- Estimates the counterfactual and is used to estimate...

SCRQoL gain:

Impact of service on SCRQoL (current – expected)

Summary

- ASCOT measures SCRQoL
- 8 domains
- 4 levels (outcome states)
- All measure current SCRQoL
- Some estimate expected SCRQoL
- Current-expected= SCRQoL gain (impact)
